

## NANOMECHANICS, INC.

December 18, 2014

To Whom it May Concern,

S. Dawn Sievers worked for Nanomechanics, Incorporated from November 2013 through February 2014 on the documentation process for our proprietary instrumentation of InSEM and iNano Indentation Systems. This documentation process produced comprehensive user manual, software and installation processes for both systems, and also encompassed creation of online Help Manual documentation of the aforementioned.

During this documentation process, we relied on Dawn's innovation and self-starter skills to jumpstart the project. We had a general expectation of this documentation process and we were more than impressed and satisfied with the final document that was produced. Dawn proved to be an asset to accomplishing our documentation goals, working well with our team and applying attention to detail and continuity of the highly technical content called for with this project.

Our instrumentation is subject to constant upgrades to meet the ongoing demands of current technologies, and as such, we will require corresponding documentation updates and upgrades. In this respect, we look forward to the possibility of inviting Ms. Sievers back to work on future Nanomechanics, Inc. projects. As her immediate supervisor on the InSEM and iNano Indentation Systems documentation projects, I can recommend her as a highly accomplished technical writer and editor.

Bryan Crawford
